Xml file template

Take a look at our example of an .xml file:

```xml
<?xml version="1.0" ?>
<resources>
    <string name="action_settings">Settings</string>
    <string name="action_open">Open</string>
    <string name="action_close">Close</string>
    <string name="concert">Concert</string>
    <string name="_14_august_2019">14 August 2019</string>
    <string name="log_in">Log In</string>
    <string name="register">Register</string>
    <string name="code">code</string>
    <string name="get_code">Get Code</string>
    <string name="button">Button</string>
    <string name="choose_file">Choose file</string>
    <string name="enter_file_name">Enter file name</string>
    <string name="upload">Upload</string>
    <string name="firstname">Firstname</string>
    <string name="lastname">Lastname</string>
    <string name="phone_number">Phone number</string>
    <string name="log_in">Log in</string>
    <string name="log_out">Log Out</string>
    <string name="delete">Delete</string>
</resources>
```

Please firstly place all of you'r strings inside a <resources> node and after create <string> nodes for each of you'r separate phrases.

After translation when you download you'r file the translated phrases will be at the bottom of the file in <TranslatedString> nodes.
